

Patient Scan Analysis

Prediction: Best benchmark model: densenet121

Classification Confidence: Weighted F1 = 0.5418

Accuracy: 0.6205

Malignancy Probability: Derived per-image during inference from softmax scores.

Tumor Area: Not available from the current slice-level dataset without segmentation masks.

Tumor Location: Weakly supervised heatmaps are available in explainability outputs.

Risk Category: Use clinical judgement; this pipeline is research-only.

Explainability: Explainability artifact generation skipped: Output 0 of BackwardHookFunctionBackward is a view a
